FOR IMMEDIATE PRESS RELEASE

TAKE Solutions' Life Sciences Division Announces Enhanced PharmaReady Product With Paper Submissions Module

*Award Winning PharmaReady™ Suite of Products Now Includes
Paper Submissions Capabilities*

Raleigh, N.C. – October 8, 2008 — Today, TAKE Solutions' Life Sciences division announced the addition of a Paper Submissions Module to its PharmaReady suite of Document & Submission Management products. This new module is in response to consumer demand to support paper submissions until the market has completely converted to electronic submissions.

“We had multiple companies come to us looking for an interim solution,” stated Suren Dheenadayalan, Director Product Strategy, TAKE Solutions. “We know how important it is for global pharmaceutical companies to have a comprehensive solution that addresses regulatory submissions across different global agencies. Now, with the PharmaReady Paper Publishing Module, these global bio pharmaceutical companies can prepare submission documents once and submit the dossier across different global regulatory agencies without significant changes compared to duplicating the entire effort for every new agency,” continued Dheenadayalan.

The variations in submission modes (electronic/paper/hybrid) and submission formats (CTD/eCTD/NEES/non-CTD) accepted by different regulatory agencies can be largely mitigated with a centralized document management system supported by publishing modules that cater to the specific agency's requirements. “Paper or electronic, create it once, submit it many times” is the preferred solution the industry is looking for, and PharmaReady promises to serve this need.

The **Paper Publishing Module** key features include:

1. Assemble & organize submission documents based on volumes, modules and agency-specific classifications
2. Accept the following submission dossiers:

- a. eCTD
- b. NEES (Non-eCTD electronic submissions)
- c. Non-CTD
3. Accept all common Microsoft Office document formats as well as PDF
4. Create agency-specific submission structure and compile documents
5. Create volume and module headers and separators
6. Create global, volume & module table of contents
7. Create continuous/volume/module-based page numbers
8. Preview the print-ready documents to avoid last minute corrections
9. Print final submission-ready dossier

“We are excited that through the release of our paper publishing module we’ll be able to address the full life cycle needs of global pharmaceutical companies striving to meet the various regulatory submission demands. TAKE Solutions’ vast knowledge and experience with global regulatory agencies, life sciences domain, and enabling technologies makes us uniquely qualified to deliver high value to our customers in this mission-critical business area,” stated Suren Dheenadayalan.

[About PharmaReady™](#)

[PharmaReady](#) is a fully integrated web-based product and services solution suite including [Document Management](#), [Training Records Management](#), [Structured Product Labeling](#) and [Submission Services](#). PharmaReady is specifically designed for life science organizations where ease of installation, ease of use, Part 11 compliance, and affordability are the primary business drivers. The PharmaReady solution suite is designed for management of SOPs, work instructions, training records, submission documents and all other documents within business areas regulated by the FDA.
